41 Justifying the information technology budget within changing environments   77%
C. Francalanci , P. Maggiolini
Proceedings of the 1994 computer personnel research conference on Reinventing IS : managing information technology in changing organizations: managing information technology in changing organizations April 1994
> The paper analyzes the relationship between business performance and investments in information technologies. The present economic crisis is shouting unprecedented defiances not only at firms, but also at CIO (Chief Information Officers) and IS professionals in general: big companies are determined on cutting down the IT expense, both in absolute and related to the revenue and it is difficult for the CIO to ask top executives for further investments and even to justify the current levels of ...

42 Participatory design of a portable torque-feedback device   77%
Michael Good
Proceedings of the SIGCHI conference on Human factors in computing systems June 1992
> Customer-driven design processes such as participatory design can be used to develop new presence, or virtual reality, technology. Chemists worked together with computer company engineers to develop scenarios for how present technology could be used to support future molecular modeling work in drug design. These scenarios led to the development of a portable torque-feedback device which can be used with either workstation or virtual reality technology. This paper discusses both the experien ...

43 Deformable curve and surface finite-elements for free-form shape design   77%
George Celniker , Dave Gossard

ACM SIGGRAPH Computer Graphics , Proceedings of the 18th annual conference on Computer graphics and interactive techniques July 1991
Volume 25 Issue 4

1 Dependency-style generic haskell   77%
Andres Löh , Dave Clarke , Johan Jeuring
**ACM SIGPLAN Notices , Proceedings of the eighth ACM SIGPLAN international
conference on Functional programming** August 2003
Volume 38 Issue 9
> Generic Haskell is an extension of Haskell that supports the construction of generic
> programs. During the development of several applications, such as an XML editor and
> compressor, we encountered a number of limitations with the existing (Classic)
> Generic Haskell language, as implemented by the current Generic Haskell compiler.
> Specifically, generic definitions become disproportionately more difficult to write as
> their complexity increases, such as when one generic function uses another,
> because ...

2 Cryptography and competition policy: issues with 'trusted computing'   77%
Ross Anderson
**Proceedings of the twenty-second annual symposium on Principles of distributed
computing** July 2003
> The most significant strategic development in information technology over the past
> year has been 'trusted computing'. This is popularly associated with Microsoft's
> 'Palladium' project, recently renamed 'NGSCB'. In this paper, I give an outline of the
> technical aspects of 'trusted computing' and sketch some of the public policy
> consequences.

3 Data integrity: Web application security assessment by fault injection   77%
and behavior monitoring
Yao-Wen Huang , Shih-Kun Huang , Tsung-Po Lin , Chung-Hung Tsai
Proceedings of the twelfth international conference on World Wide Web May 2003
> As a large and complex application platform, the World Wide Web is capable of
> delivering a broad range of sophisticated applications. However, many Web
> applications go through rapid development phases with extremely short turnaround
> time, making it difficult to eliminate vulnerabilities. Here we analyze the design of

Web application security assessment mechanisms in order to identify poor coding practices that render Web applications vulnerable to attacks such as SQL injection and cross-site scr ...

4 Ethical codes and their effect on conduct   77%
James Harris , Maeve Cummings , Christine Fogliasso
The Journal of Computing in Small Colleges October 2002
Volume 18 Issue 1
> The simplest and most visible way for an organization to show its commitment to ethics is to issue a code of ethics that encourages the organization members to behave in an ethical way. This study investigates the efficacy of a code of ethics in a hypothetical situation. It shows that even a brief exposure to a code of ethics can have the desired effect.

5 Climb Meru: an integrated brand experience   77%
Andrew Davison , Brendan Kiernan , Max Chadwick , Kameron Kerger , Matt Ludwig
Case studies of the CHI2002|AIGA Experience Design FORUM April 2002
> Small innovative design firm tackles the challenge of creating complex cross-channel brand experiences through the application of Experience Design methodology.The key findings -The development of an experience design methodology supports a rapid and cost effective brand marketing campaign focused on defining and delivering user experiences.An integrated marketing campaign leveraging multiple marketing channels, proves extremely effective at reaching key, difficult to reach customer segments.A W ...

6 Our experience and learning in ERP implementation   77%
Rakesh Agarwal , Arup Ratan Raha , Bhaskar Ghosh
ACM SIGSOFT Software Engineering Notes March 2000
Volume 25 Issue 2
> Information systems developed to support the functional units of a complete enterprise (referred in this paper as "application package") only serve standard industry processes. Very often, the business processes that differentiate an organization from another are the processes that define their competitive edge. This competitive edge can be achieved if the implemented processes are based on the best practices supported by these packages. This requires a strong knowledge of Business Processes, ad ...

7 Interoperation support for electronic business   77%

13 Using semantic values to facilitate interoperability among   77%
heterogeneous information systems
Edward Sciore , Michael Siegel , Arnon Rosenthal
ACM Transactions on Database Systems (TODS) June 1994
Volume 19 Issue 2
Large organizations need to exchange information among many separately developed
systems. In order for this exchange to be useful, the individual systems must agree
on the meaning of their exchanged data. That is, the organization must ensure
semantic interoperability. This paper provides a theory of semantic values as a unit of
exchange that facilitates semantic interoperability betweeen heterogeneous
information systems. We show how semantic values can ei ...

14 The marks are on the knowledge worker   77%

Alison Kidd
**Proceedings of the SIGCHI conference on Human factors in computing systems:
celebrating interdependence** April 1994
